DETAILED ACTION
REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

The method of increasing active IGF-I levels in a mammal having a lower level of active IGF-I, the method for treating reduced renal function, and the method for treating type II diabetes comprising administering an insulin-like growth factor-I (IGF-I) variant wherein the amino acid residue at position 16, 25, or 49 or the amino acid residues at positions 3 and 49 of native-sequence human IGF-I are replaced with an alanine, a glycine, or a serine residue are novel and nonobvious. The claims of the instant application are free of prior art because the utilization of an IGF-I variant comprising the amino acid residue replacements described above in *in vivo* methods has not been disclosed or studied in the prior art. The specification meets 35 U.S.C. 112, first paragraph, requirements because it contains an adequate written description of the invention that enables one of ordinary skill in the art to make and use the invention. The specification also sets forth the best mode to carry out the invention. The claims also meet 35 U.S.C. 112, second paragraph, requirements because the claims point out and distinctly claim the invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
